

July 26, 2016

Mr. Bob McCullough EcoVest Capital, Inc. Monarch Tower 3424 Peachtree Road NE, Suite 1550 Atlanta, Georgia 30326

Subject: Camellia Station

Approximately 45.22 Acres

Off Old Sanders Road and Sandridge Road Extension

TMS# 143-00-01-046, 019, 052 North Myrtle Beach, Horry County

South Carolina

Mr. McCullough:

The Brigman Company has completed the authorized Phase I Environmental Site Assessment (ESA) of approximately 45.22 total acres to be known as Camellia Station and located off Old Sanders Road and Sandridge Road Extension in North Myrtle Beach, Horry County, South Carolina.

The Phase I ESA work was performed in general accordance with American Society for Testing Materials (ASTM) Standard E 1527-13 Standard Practice for Site Assessments: Phase I Environmental Site Assessment Process unless otherwise noted. The attached report reveals our findings along with the information regarding the project information, services performed, findings, and conclusion. While The Brigman Company did not identify any notable recognized environmental conditions associated with the subject property, this summary below should not be substituted for a full review of the report of the subject property and surrounding properties.

Summary of Findings:

1. A review of federal and state databases was conducted to assess environmental conditions on the subject property and surrounding properties that may pose an environmental concern. This data suggests that activities have been limited to excavation associated with a mining operation from 1987 to 2006. During this time span mining of sand and limestone (coquina) occurred and was processed onsite. The processing facility is no longer in operation and only remnants such as concrete pads/containment walls and various abandoned plumbing/electrical lines associated with dewatering process remain. The database search produced one surrounding property of environmental interest. The identified property did not represent any significant, direct environmental impact to the subject property or any proposed uses of the subject property based on the analysis of information gathered or provided. Pmining and Composting solid waste landfill, according to the former owner/operator, was once a small natural materials disposal area. The site is not located on the subject property, but along Fire Tower Road, and is no longer in use. This area was used for the disposal of stumps and debris encountered during land clearing, cleanup and composting. It is reported that this composting area was used for natural debris only and no household or industrial waste was placed in the area. Due to the nature of materials disposed and the distance to the subject property this is not considered a significant threat to the subject property.

- 2. Site reconnaissance visits in June 6, 2016 provided the following physical evidence of recognized environmental conditions on the subject property or in connection with the subject property. Small quantities of tractor fluid, stored in a concrete floored equipment shelter. The small amount and storage location does not appear to be threatening the to the subject site.
- 3. Any data gaps encountered during the assessment were considered *De minimis* in the identification of recognized environmental conditions present on the subject property. No reasonably-ascertainable data suggests the subject property has or had any additional, historical uses other than undeveloped forested, agricultural or mined for coquina with minimal land improvements since 1952.
- 4. It is recommended that all onsite wells if not in use, be properly abandoned in accordance to SCDHEC regulations.
- 5. This report supersedes the previous report dated June 10, 2016 for a boundary revision from 41.29 acres to a final acreage of 45.22.
- 6. The boundaries shown in Exhibits II & III are not a reflection of the final revised area reflected in this report. These exhibits are prepared by a third party source and were not revised due to no changes in final results.

Any data gaps encountered during the assessment were considered *De minimis* in the identification of recognized environmental conditions present on the subject property. No reasonably-ascertainable data suggests the subject property has or had any additional, historical uses other than undeveloped forested

We appreciate your selection of The Brigman Company and for the opportunity to be of service on this project. Please feel free to contact us if you have any questions or if we maybe of further assistance.

Sincerely,

Jill M. Feldner

The Brigman Company

cum Feldner

July 2016

1.0 INTRODUCTION

The Brigman Company, Inc. (TBC) was retained by Bob McCullough with EcoVest Capital, Inc. to perform a Phase I Environmental Site Assessment (ESA) on approximately 45.22 total acres located off Old Sanders Road and Sandridge Road Extension in North Myrtle Beach, Horry County, South Carolina (here in after referred to as the subject property), see Figure 1. Horry County tax information further defines the subject property with tax map numbers of 143-00-01-046, 143-00-01-019, and 143-00-01-052. The scope of the Phase I ESA is consistent with the American Society for Testing and Materials (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments: Phase I ESA Process Scope of Work.

1.1 PURPOSE

The purpose of this assessment is to assist in reviewing the general environmental condition of the land that comprises the subject property. Specifically, the report seeks to identify areas with recognized environmental conditions (REC) or environmental concern on and near the property and records of those areas that may adversely impact the property owner or operator under existing federal, state, and local environmental laws and to recommend further actions necessary to confirm, quantify, or abate those conditions.

TBC undertook the following actions to accomplish its Phase I ESA mandate:

- 1. Physical inspection of the subject property by TBC on June 6, 2016 to locate and identify obvious recognized environmental conditions (REC), such as signs of chemical spills, visual and documented evidence of petroleum or other chemical storage tanks and improper use, storage and disposal of hazardous materials, and polychlorinated biphenyl (PCB)-containing electrical equipment.
- 2. A review of reasonably-ascertainable federal and state standard environmental record sources using minimum search distances from the subject property, as defined by ASTM E 1527-13, to identify adjacent and nearby sites with known environmental impairments or operations registered to handle hazardous substances and wastes.
- 3. A review of reasonably-ascertainable standard historic sources which might include aerial photographs, fire insurance maps, property tax files, recorded land title records, United States Geological Survey (USGS) 7.5 Minute Topographic Maps, local street directories, building department records, zoning/land use records, other historic sources or other information provided by the user of this report.

1.2 LIMITATIONS AND EXCEPTIONS OF ASSESSMENT

This Phase I ESA reflects conditions that were visibly evident in those areas where access was available on the dates of TBC's site visits and offers both information about the property and the operations performed on site. However, visual inspections were limited to those areas of the property that were accessible during the site visit.

The site reconnaissance involved inspecting readily-accessible areas and did not include investigations involving soil evaluations, areas under concrete or asphalt paving, or other areas which could not be reasonably inspected without the use of specialty equipment such as heavy machinery or geophysical probing devices.

TBC cannot be held responsible if site conditions change in the future and environmental conditions arise which reasonably could not have been identified during the site reconnaissance initially conducted.

Lead-based paint, lead in drinking water, asbestos, radon, microbial contamination (mold), and wetlands investigations are not required under ASTM E 1527-13 inspection standards. Since ASTM E 1527-13 does not require that these inspections be conducted, said inspections were not performed as part of this Phase I ESA.

Industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, biological agents, regulatory compliance, and cultural and historical resource investigations were not included in our scope of services; therefore, were not completed.

Deeds and chain-of-ownership information in this report should in no way be construed as an actual Title search and should not be utilized or relied upon for any legal purpose.

TBC's Phase I ESA is for use exclusively by EcoVest Capital, Inc. and its assigns only.

2.0 PROPERTY LOCATION AND LEGAL DESCRIPTION

2.1 PROPERTY LOCATION AND LEGAL DESCRIPTION

Street Address: off Sandridge Road Extension and Old Sanders Road

Latitude/Longitude: 33.836152 N/ -78.701431 W

City/State: North Myrtle Beach, South Carolina

County: Horry

Tax Map Number: 143-00-01-046, 143-00-01-019, 143-00-01-052

Current Owner: Permenter Brother Holdings, LLC (143-00-01-046, 019, & 052)

Current Land Use: Undeveloped with improvements

Lot Shape: Irregular

Elevation: Approximately 25 feet above sea level

2.2 PROPERTY DESCRIPTION

The subject property is the union of several smaller parcels (tax map numbers of 143-00-01-046, 143-00-01-019, and 143-00-01-052) to create an irregular parcel containing approximately 45.22 total acres in North Myrtle Beach, Horry County. The property consist of forested areas along the southern, western, and northern boundary, an open area currently maintained in grass in the northeastern quadrant and a large pond that was excavated from upland for mining purposes in the southeastern quadrant.

The subject property is located between Sandridge Road to the North and East with the Atlantic Intracoastal Waterway just south of the subject property.

The current listed owner is Permenter Brothers Holdings, LLC.

Refer to Exhibit I for site photographs.

2.3 UTILITIES

The subject property currently has no permanent structures. Properties adjacent to the subject property are being serviced by the following utility companies:

Water: Grand Strand Water & Sewer District
Sanitary Sewer: Grand Strand Water & Sewer District

Electric: Santee Cooper

Solid Waste: Horry County Solid Waste Authority

2.4 HEATING SOURCE

There is no enclosed structure located on the subject property; therefore no heating sources were documented.

2.5 CURRENT USES OF ADJOINING PROPERTIES

The subject property is primarily undeveloped with an equipment shelter and an abandoned processing facility associated with previous mining activities. In order to assess the potential impacts that the surrounding and adjacent properties may have on the subject property a review was conducted to evaluate the potential for impacts. This was conducted through visual reconnaissance and record reviews, no further evaluations were conducted. Properties surrounding the subject property are varied in their uses. Specifically, the current uses of adjoining properties are as follows:

North: To the north of the subject property is Sandridge Road Extension and an existing

overhead transmission line. North of Sandridge is an undeveloped property owned

by Palmetto Main Street Partners, LLC.

East: The subject property is bound to the east by a property owned by Permenter

Brothers Holding, LLC. The property is undeveloped and primarily maintained in a grass state with a few small wooded areas and the remainder of the pond

contained on the subject property which is a reclaimed mine.

<u>South</u>: South of the subject property are 3 parcels owned by Permenter Brothers Holdings,

LLC and Sea Vista Resort, LLC. All three properties are undeveloped and consist of both open area maintained in a grass state and wooded area. Minimal improvements such as access roads and a small abandoned dewatering facility

used during the mining process are present.

<u>West</u>: West of the subject property is a single parcel owned by Wampee Plantation

Limited Partnership. This parcel is currently in agriculture and appears to produce

an annual crop.

2.6 PHYSICAL SETTING ANALYSIS

2.6.1 SITE GEOLOGY/SOIL

The soil in the area of the subject property is largely mapped as Leon fine sand. This soil profile is typically black fine sand to a depth of 5 inches, underlain to a depth of 9 inches with light gray fine sand. The remaining subsoil layers are to a depth of 72 inches and are black to 14 inches, dark brown to 20 inches, pale brown to 40 inches and dark brown to 72 inches.

According to the United States Department of Agriculture Soil Conservation Service Soil Survey for Horry County, South Carolina, soils in the area of the subject property are poorly drained with rapid permeability that formed in loamy and sandy stratified Coastal Plain sediments in drainage ways and on nearly level. The seasonal high water table ranges from 0 to a depth of 1.0 feet below the surface from June through February.

2.6.2 SITE TOPOGRAPHY

The ground surface of the subject property is generally level with minimal gradient change. The approximate elevation of the subject property is 25 feet above sea level. Rainfall is expected to infiltrate on-site soils and discharge north to adjacent pond or south toward the Atlantic Intracoastal Waterway through natural drainage pathways. Based upon a review of the USGS 7.5 Minute Series Topographic Map, (Wampee Quad), groundwater is anticipated to flow in a general northern direction along with the general gradient. Detailed investigations involving the installation of groundwater monitoring wells and piezometers would be required to ascertain a more precise groundwater flow direction. No monitoring wells or domestic drinking water wells observed on the property.

3.0 HISTORIC INFORMATION

3.1 SANBORN® FIRE INSURANCE MAPS (SANBORNS)

TBC requested a historic map search, according to EDR, Sanborn Map coverage is not available for the area of the subject property.

3.2 AERIAL PHOTOGRAPHS & TOPOGRAPHIC MAPS

In order to obtain a history of property use, TBC reviewed aerial photographs for the subject property. Aerial photographs were only available for the years 1952, 1958, 1972, 1983, 1987, 1993, 1994, 1999, 2005, 2006, 2009, and 2011. The aerial photographs were examined to determine prior usage, development, and construction. Refer to Exhibit II for historic aerial photos.

Our review of available aerial photographs revealed the following:

<u>1952-1972</u>

In the 1952, 1958, & 1972 aerial photo the subject property is visible. The subject property and the adjacent properties appear to be in use as forest and agriculture with very little surrounding development. Clearly defined agriculture fields can be distinguished in the vicinity of the subject property as well as a small portion of an agriculture field in the southeastern quadrant of the property. The majority of the property was forested in this time span with improvements limited to a single access road bisecting the subject property.

1983-1987

The subject property appears to be undeveloped and still in use as forest and agriculture with the evidence of some excavation/land clearing east of the subject property. Land clearing, channelization and expansion of existing drainage way to Intracoastal Waterway in the 1983 aerial leads to a small pond visible in 1987. The pond on the 1987 aerial appears to encroach on the eastern boundary of the subject site.

1993-1994

The subject property appears to be forested in those areas previously in this use with additional mining activities within the southeastern quadrant of the property. Evidence of mining material stock piles can be seen along the northwestern limits of the mine in the center of the subject property. The surrounding properties remain undeveloped and in use as forest and agriculture.

1999-2005

The aerial photos representing the years 1999-2005 show the southeastern quadrant of the subject property in progress through various stages of coquina and sand mining. Evidence of the processing facility can be seen during these years. The 2005 aerial shows the current mine no longer dewatered and appears to be fully reclaimed and representative of its current condition. The property directly south appears to be the location of a stockpile area on the 2005 aerial photograph. Surrounding development is evident on both aerials with the addition of SC Highway 31 evident on the 2005 aerial photograph.

2006-2009

The 2006 and 2009 photographs show the subject property unchanged. In 2009, the property directly south of the subject site appears to no longer contain stockpile material associated with the previous mining activities. The construction of the North Myrtle Beach Main Street Connector can be seen northeast of the subject property on both aerials. Additional residential development is evident west of the subject property.

2011

The subject property appears unchanged in the 2011 photograph. The surrounding properties appear to have no excavating, construction or improvement activities ongoing. The subject property and adjacent property appear to be in the state that they remain in currently.

3.3 SUMMARY OF HISTORIC INFORMATION

A review of the historic information available suggests that activities have been limited to excavation associated with a mining operation from 1987 to 2006. During this time span mining of sand and limestone (coquina) occurred and was processed onsite. The processing facility is no longer in operation and only remnants such as concrete pads/containment walls and various abandoned plumbing/electrical lines associated with dewatering process remain. Since 2006, the mining operations appear to have ceased with the mine fully reclaimed between the years of 1999-2005. The remainder of the property has remained unchanged and in use as forest/agriculture. Additional improvements within the subject property have been limited to access roads. The construction of roads and housing shows substantial increase in the area surrounding the subject property since 1952.

No additional historic or environmental information was provided by the user or owner for review for this report. EDR performed a City Directory Search to identify any addresses on or near the subject and their designed to assist in identifying previous address and uses of the subject property and surrounding properties. The City Directory has no historical record of the subject property.

4.0 RECORDS REVIEW

4.1 FEDERAL AND STATE DATABASE REVIEW

Delineated in the table below, is a listing of federal and state database searches for the subject property and the neighboring area for sites that may have or have had an environmental impact on the subject property. This database search was conducted by Environmental Data Resources on April 27, 2016 in accordance with ASTM 1527-13.

TP- Target Property; N/A - Not Applicable

4.1.1 STATE HAZARDOUS WASTE SITES (SHWS) & SOLID WASTE DISPOSAL SITES

The subject property is not identified in the SHWS database. One property was listed within the one mile search radius. P-Mining and Composting is identified as a Solid Waste Disposal/Landfill. This site, according to Mr. Permenter of P-Mining, was once a small, natural materials disposal area, but was not located on the subject property but along Fire Tower Road, and is no longer in use. This area was used for the disposal of stumps and debris encountered during land clearing, cleanup and composting. Mr. Permeter stated that this composting area was used for natural debris only and no household or industrial waste was placed in the area.

4.1.2 LEAKING UNDERGROUND STORAGE TANK (LUST) SITES

The subject property was not identified in the LUST database. Although the following property was not listed within the 0.5 mile search radius, detailed records investigation revealed a LUST within the search radius. A leaking underground storage tank release was identified as the Fleet Operations Building, located at 1120 Second Avenue South, North Myrtle Beach. This site is mapped on the EDR Radius Search Map and is actually located across the Atlantic Intracoastal Waterway according to the Radius Search Map. The site owned by the City of North Myrtle Beach houses 4 underground petroleum tanks. The 4 underground storage tanks are all listed to be incompliance according to the South Carolina Department of Health and Environmental Control Underground Storage Tank Registry. This site was confirmed to have a leaking, underground petroleum storage tank in March of 1993. The site was listed in the GWCI from the previous petroleum release from the leaking underground storage tank with a cleanup initiated date of March 18, 1993. This site is not considered a significant threat to the subject property based on its location and the separation of the sites by the Atlantic Intracoastal Waterway.

4.1.3 UNDERGROUND STORAGE TANK (UST) SITES

The subject property is not identified in the UST database search conducted by EDR. No UST is identified within the 0.25 search radius. Underground storage tanks were identified

outside of the mandated search radius. These tanks were associated with the City of North Myrtle Beach's Fleet Operations Building and are registered with South Carolina Department of Health and Environmental Control Underground Storage Tank Registry.

4.1.4 VOLUNTARY CLEANUP PROGRAM (VCP) SITES

The subject property is not identified in the VCP database. No sites are identified within a 0.5 mile radius of the subject property.

4.1.5 SOUTH CAROLINA SPILLS LIST (SC SPILLS)

The subject property was not identified in the SC Spills database.

4.1.6 GROUNDWATER CONTAMINATION INVENTORY CASES (GWCI)

The subject property is not identified in the GWCI database. No site is identified within a 0.5 mile radius of the subject property.

4.1.7 COAL GAS SITES

No sites, including the subject property, are identified within a one mile radius.

4.1.8 EDR PROPRIETARY HISTORICAL DATABASES

Several EDR proprietary historical databases were searched. EDR identified no historical auto stations within the search radius.

4.1.9 HAZARDOUS WASTE SMALL QUANTITY GENERATORS (RCRA-SQG)

No properties were identified within 0.125-acre search radius or within a 1 mile search radius of the subject parcel. No violations have been reported as of the database search and report date.

4.1.10 CONDITIONALLY EXEMPT SMALL QUANTITY GENERATORS Quantity Generators (RCRACESQG)

The Resource Conservation and Recovery Act Conditionally Exempt Small Quantity Generator database did not identify the subject property or properties surrounding the subject property.

4.1.11 NONGENERATORS (RCRA-NonGen/NLR)

The Resource Conservation and Recovery Act Non-Generating database produced no records within 0.25 mile search radius.

4.1.12 FINDS SITES

The Facility Index System (FINDS) only indicates entries for the target property only. The subject property did not produce a record for this database.

4.1.13 FUDS SITES

The Formally Used Defense Sites (FUDS) database produces records for properties that once were serviced by the Department of Defense. No record of the subject property was

produced from the EDR record search.

4.1.14 ORPHAN SITES (UNMAPPED SITES)

There were no orphan sites (sites with insufficient information that are unmapped) listed in the database searches.

4.1.15 VAPOR ENCROACHMENT SCREEN

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The screening helps to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions (E 2600-10).

The screen of the subject property revealed no information from the surrounding areas to warrant further investigations of the potential of vapor migration and intrusion at the time of the report.

4.2 REGULATORY AGENCY REVIEW and OUESTIONNAIRE

Mr. Graeme Black, agent for the property purchaser, completed a user questionnaire on April 18, 2016, to detail any relevant information concerning the subject site, such as any environmental cleanup liens, activity limitations, and hazardous materials being stored or used on the site or any other pertinent environmental information or historical uses of the property. No additional environmental information was provided by the user through the questionnaire.

A telephone interview was conducted with Mr. Charles Permenter of P-Mining and Permenter Brothers Holdings, LLC during a previous site assessment for a portion of the same parent tract. Mr. Permenter is the current owner of the subject property. Mr. Permenter was asked to provide general information about the historical uses of the property and chain of ownership. According to Mr. Permenter, the subject property and surrounding acreage has been under the ownership of his family for at least 50 - 60 years. The property was formerly a sand and limestone (coquina) mine until approximately 2003. The mine operations included the excavation, storage and crushing of the limestone material to smaller aggregate for transport offsite. Mr. Permenter stated that no underground storage tanks were ever used or installed on the subject property or adjacent property before or during the mining operation. Above ground storage tanks were used and precautions, such as concrete pads, were used under the tanks. The tanks were removed when the mining operation closed. In reference to the solid waste landfill near the subject site, according to Mr. Permenter of P-Mining, was once a small, natural materials disposal area, but was not located on the subject property but along Fire Tower Road, and is no longer in use. This area was used for the disposal of stumps and debris encountered during land clearing, cleanup and composting. Mr. Permenter stated that this composting area was used for natural debris only and no household or industrial waste was placed in the area.

In addition to the review of federal and state government databases and surrounding property Phase I reports as discussed above, TBC provided written communications, as per the Freedom of Information Act (FOIA), to the Horry County Government Department, City of North Myrtle Beach, Horry County Fire and Rescue, South Carolina Department of Health and Environmental Control (SCDHEC) Freedom of Information Office and the United States Environmental Protection Agency (USEPA) via facsimile to request reviews of files concerning environmental violations or identification of recognized environmental conditions on or near the subject property or in the immediate area of the subject property. Responses from County and Government agencies had not been received as of the time of report preparation. If pertinent files are received and

reviewed, an addendum to this report will be issued, if warranted.

Refer to Exhibit IV for FOIA communications.

5.0 SITE RECONNAISSANCE

TBC performed a site inspection of the subject property on June 6, 2016. The subject property consists of an assemblage of parcels equaling approximately 45.22 acres located off Sandridge Road Extension and Old Sanders Road and north of the Atlantic Intracoastal Waterway. The subject property was accessed along the northern boundary off Sandridge Road Extension.

Approximately 30 percent of the subject property is cleared of trees or consumed by the pond, which is the area of the former coquina and sand mine. The remaining portion of the property consist of an area currently used for the stock pile of mined material and recycled concrete that is surrounded to the north, west, and south by wooded area with limited access. Directly adjacent to the entrance in the northeastern quadrant of the property is an abandoned processing facility used during the mining activities. The processing facility is no longer in operation and only remnants such as concrete pads/containment walls and various abandoned plumbing/electrical lines associated with dewatering process remain. A capped deep water well was also observed near the former operation site. Unpaved access roads were used to observe the property. Currently the property does contain an equipment shelter that housed a small tractor, frontend loader and various household trash items and tractor fluid (see photographs).

No evidence of hazardous material dumping was identified on the subject property during the site inspection. The pond appeared to be naturalized with plant growth along the bank and evidence of fish and other aquatic organisms present. No geologic or water samples were taken from the subject property for geologic or chemical testing, including along the pond or Atlantic Intracoastal Waterway. The remainder of the property is undeveloped with minimal improvements consisting of access roads and open area currently maintained as grass.

Site reconnaissance photos are included in Exhibit 1.

5.1 HAZARDOUS MATERIAL USAGE/STORAGE

Hazardous materials or hazardous material storage was identified during the site inspection. A small quality of tractor fluid was observed in the storage shelter. No evidence of spillage or staining was observed. The fluid, contained in 5 gallon buckets were stored in the concrete floored equipment storage shelter.

5.2 ABOVEGROUND STORAGE TANKS (ASTs)

TBC did not observe evidence of ASTs on the subject property.

5.3 UNDERGROUND STORAGE TANKS (USTs)

TBC did not observe evidence of USTs currently on the subject property.

5.4 EVIDENCE OF ENVIRONMENTAL CONTAMINATION

Evidence of environmental contamination, such as visible staining (beyond iron oxidation and algal staining), discolored soil, or stressed vegetation was not observed on the subject property.

5.5 POLYCHLORINATED BIPHENYLS (PCBs)

Evidence of PCB contamination was not observed on the subject property.

5.6 WASTEWATER DISCHARGES

Evidence of wastewater discharge to the ground surface was not observed on the subject property.

5.7 SOLID/HAZARDOUS WASTE

Evidence of solid or hazardous waste was not observed on the subject property.

6.0 ENVIRONMENTAL HISTORY

No historical environmental reports were discovered during this investigation or provided by the user or customer.

7.0 CONCLUSIONS AND RECOMMENDATIONS

TBC performed a Phase I ESA, to the extent feasible pursuant to identify any *recognized environmental conditions*(*RECs*) in connection with the subject property, equaling approximately 45.22 total acres located off Old Sanders Road and Sandridge Road Extension in North Myrtle Beach and identified by Horry County Tax Map Numbers 143-00-01-046, 143-00-01-019, and 143-00-01-052 (see Figure 1). The assessment was performed in conformance with the scope and limitations of the ASTM E 1527-13 Standard Practice for Environmental Site Assessments any exceptions to, or deletions from this practice are described in this section of the report. This report has revealed no evidence of recognized environmental conditions on the subject property.

Based upon the Phase I ESA conducted, TBC provides the following findings

- 1. A review of federal and state databases was conducted to assess environmental conditions on the subject property and surrounding properties that may pose an environmental concern. This data suggests that activities have been limited to excavation associated with a mining operation from 1987 to 2006. During this time span mining of sand and limestone (coquina) occurred and was processed onsite. The processing facility is no longer in operation and only remnants such as concrete pads/containment walls and various abandoned plumbing/electrical lines associated The database search produced one surrounding property of with dewatering process remain. The identified property did not represent any significant, direct environmental interest. environmental impact to the subject property or any proposed uses of the subject property based on the analysis of information gathered or provided. P-mining and Composting solid waste landfill, according to the former owner/operator, was once a small natural materials disposal area. The site is not located on the subject property, but along Fire Tower Road, and is no longer in use. This area was used for the disposal of stumps and debris encountered during land clearing, cleanup and composting. It is reported that this composting area was used for natural debris only and no household or industrial waste was placed in the area. Due to the nature of materials disposed and the distance to the subject property this is not considered a significant threat to the subject property.
- 2. Site reconnaissance visits in June 6, 2016 provided the following physical evidence of recognized environmental conditions on the subject property or in connection with the subject property. Small quantities of tractor fluid, stored in a concrete floored equipment shelter. The small amount and storage location does not appear to be threatening the to the subject site.

- 3. Any data gaps encountered during the assessment were considered *De minimis* in the identification of recognized environmental conditions present on the subject property. No reasonably-ascertainable data suggests the subject property has or had any additional, historical uses other than undeveloped forested, agricultural or mined for coquina with minimal land improvements since 1952.
- 4. It is recommended that all onsite wells if not in use, be properly abandoned in accordance to SCDHEC regulations.
- 5. This report supersedes the previous report dated June 10, 2016 for a boundary revision from 41.29 acres to a final acreage of 45.22.
- 6. The boundaries shown in Exhibits II & III are not a reflection of the final revised area reflected in this report. These exhibits are prepared by a third party source and were not revised due to no changes in final results.

Under the All Appropriate Inquiry Rule, future and continuing obligations are required to maintain landowner liability protections under CERCLA. Specifically, (1) complying with land use restrictions and institutional controls; (2) taking reasonable steps with respect to hazardous substance releases; (3) providing full cooperation, assistance and access to persons that are authorized to conduct response actions or natural resource restoration; (4) complying with information requests and administrative subpoenas; and (5) providing legally required notices.

8.0 QUALIFICATIONS AND SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Jill M. Feldner, Biologist, conducted the site inspection and research to complete this Phase I ESA. Ms. Feldner has over 16 years experience within the natural resource and environmental health field, as well as within regulatory state government and private environmental consulting as well as additional training through ASTM. Jill M. Feldner, Environmental Professional, conducted and oversaw the completion of this Phase I ESA. A detailed resume, outlining Ms. Feldner's environmental professional qualifications, is available upon request for review.

This report was prepared using available information through government agencies and private contacts at the time of the investigation. Should TBC receive additional information that may alter the characteristics enumerated within this report, TBC reserves the right to revise this report or issue an addendum statement.

We declare to the best of our professional knowledge and belief, we meet the definition of the Environmental professional as defined in §312.10 of 40 CFR 312

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in the 40 CFR part 312.

This report has been prepared and is respectfully submitted by

THE BRIGMAN COMPANY, INC.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Health & Environmental Control's Permitted Landfills List/Inactive MSWLF List.

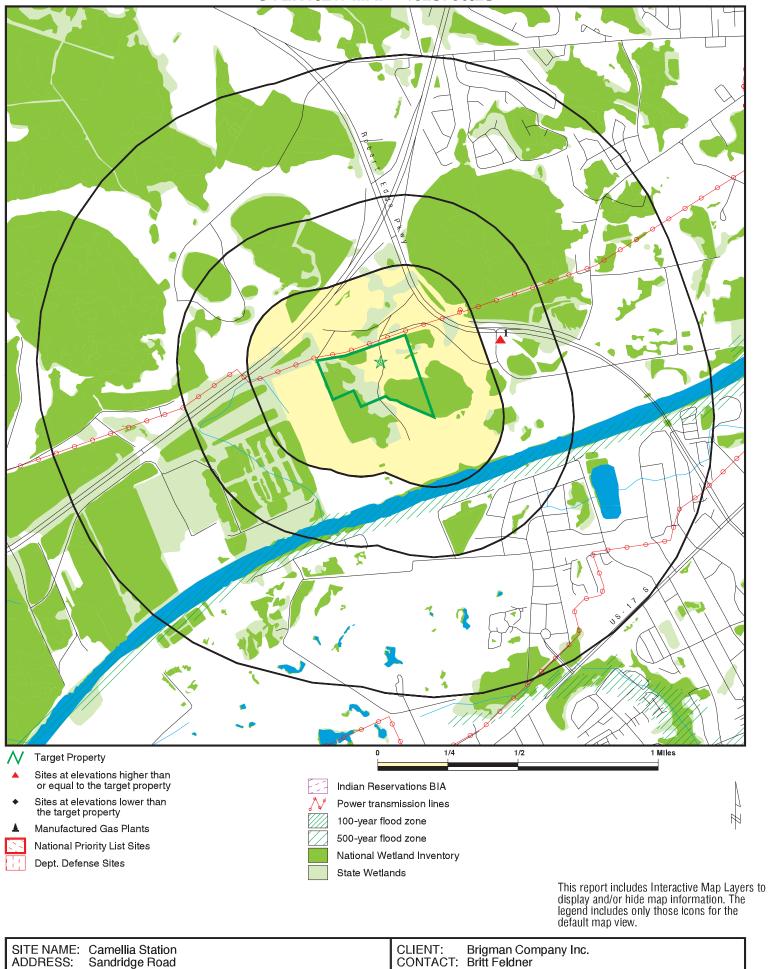

A review of the SWF/LF list, as provided by EDR, and dated 03/15/2016 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RCR: Registry of Conditional Remedies

The Bureau of Land and Waste Management established this Registry to help monitor and maintain sites that have conditional remedies. A Conditional Remedy is an environmental remedy that includes certain qualifications. These qualifications are divided into two major categories: Remedies requiring Land Use Controls and Conditional No Further Actions.

AUL: Land Use Controls

The term Land Use Controls or "LUCs" encompass institutional controls, such as those involved in real estate interests, governmental permitting, zoning, public advisories, deed notices, and other legal restrictions. The term also includes restrictions on access, whether achieved by means of engineered barriers (e.g., fence or concrete pad) or by human means (e.g., the presence of security guards). Additionally, the term includes both affirmative measures to achieve the desired restrictions (e.g., night lighting of an area) and prohibitive directives (e.g., restrictions on certain types of wells for the duration of the corrective action). Considered altogether, the LUCs for a facility will provide a tool for how the property should be used in order to maintain the level of protectiveness that one or more corrective actions were designed to achieve.

State and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Sites

Sites participating in the Voluntary Cleanup Program. Once staff and a non-responsible party have agreed upon an approved scope of work for a site investigation and/or remediation, the party enters into a voluntary cleanup contract. Staff oversees the cleanup efforts to ensure that activities are performed to our satisfaction. Upon completion of the negotiated work in the voluntary cleanup contract, the non-responsible party receives State Superfund liability protection.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

ALLSITES: Site Assessment & Remediation Public Record Database

The South Carolina Department of Health and Environmental Control is pleased to have the Public Record for your review. The purpose of this database is two-fold. First, it will provide to communities another form of notice of cleanup activity, allowing them to have more information about assessment and cleanup activities in their area and in the State. Second, it can assist those seeking to redevelop brownfield properties within South Carolina.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Date of Government Version: N/A Date Data Arrived at EDR: N/A Date Made Active in Reports: N/A Number of Days to Update: N/A Source: EDR, Inc. Telephone: N/A Last EDR Contact: N/A

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services,

a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Elevation: 25 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 6065435 WAMPEE, SC

Version Date: 2014

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

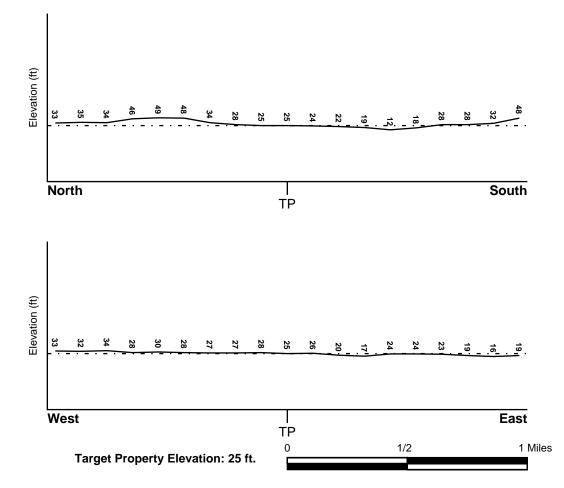

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

FEMA Flood Electronic Data

Target Property County HORRY, SC

NATIONAL WETLAND INVENTORY

NWI Electronic

NWI Quad at Target Property

Data Coverage

WAMPEE

YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID Not Reported LOCATION FROM TP

GENERAL DIRECTION
GROUNDWATER FLOW

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Water

Soil Surface Texture: water

Hydrologic Group: Not reported

Soil Drainage Class: Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory Source: Department of Natural Resources

Telephone: 803-734-9494

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Brigman Company Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Dear Sir/Madam:

The Brigman Company is conducting an environmental site assessment of the above-referenced property. As part of the assessment, we are requesting that your office perform a records search to identify files of environmental concern that your office may have regarding the subject property or nearby properties. In addition to hazardous material incidents, we would like to know if your office has information regarding underground storage tanks, wells and/or septic systems located on the property.

If files are located for this property, please contact me so that I may schedule an appointment for a file review or request copies of essential information. If there are none, kindly advise me in writing. Please notify me if any other charges may apply or requires research beyond that scope of payment is required.

Thank you for your time and attention to this matter and please do not hesitate to contact me at **843-248-9388** if you have questions or would like additional information.

Sincerely,

Jill Feldner

Project Manager
